

Project Summary — UNDP M&E Indicator Tracker

Project Title

UNDP Kano Youth Livelihood & Empowerment Programme Monitoring & Evaluation Indicator Tracker

Project Type

Data Analytics / Monitoring & Evaluation Dashboard

Industry

International Development / NGO / United Nations

Tools Used

- Python
- Microsoft Excel
- Power BI
- Power Query
- DAX

Project Overview

This project involved the design and development of a professional Monitoring & Evaluation (M&E) dashboard for a simulated United Nations Development Programme (UNDP) youth empowerment programme operating across Kano State, Nigeria.

The purpose of the dashboard was to provide a centralized analytical platform for tracking programme implementation, measuring performance, monitoring risks, and supporting evidence-based decision making.

The solution transformed raw operational data into interactive dashboards for programme managers, M&E officers, and stakeholders.

Business Problem

Large-scale development programmes generate substantial amounts of beneficiary and operational data.

Without centralized reporting systems, organizations often struggle with:

- Delayed reporting
- Poor KPI visibility
- Weak budget tracking
- Slow risk escalation
- Limited decision-making insights

This project addressed these challenges by creating a modern reporting dashboard.

Objectives

The main objectives were to:

- Track beneficiaries reached across Kano LGAs
 - Monitor programme KPIs against targets
 - Analyze gender and youth inclusion
 - Track grant disbursement
 - Monitor budget utilization
 - Identify implementation risks
 - Improve programme visibility
-

Dataset Summary

A realistic synthetic dataset was created using Python.

Dataset structure included 4 integrated tables:

Beneficiaries

Contains 1,500+ records including:

- LGA
- Gender
- Age
- Programme type
- Income before and after intervention
- Satisfaction score

KPI Tracker

Tracks targets and actual performance.

Budget Tracker

Monitors budget allocation and spending by LGA.

Risk Register

Tracks operational risks and severity levels.

Dashboard Features

The Power BI dashboard consists of 4 pages:

1. Executive Overview

High-level KPIs and programme summary.

2. Programme Performance

Target vs actual performance tracking.

3. Budget Monitoring

Budget allocation and utilization analysis.

4. Risk Dashboard

Operational risk analysis and issue monitoring.

Key Insights

Analysis revealed:

- 1,500+ beneficiaries reached across 12 LGAs
 - Female participation exceeded 50%
 - Youth participation remained strong
 - Budget utilization exceeded 80%
 - ICT and vocational programmes showed highest demand
 - Beneficiaries recorded positive income growth
 - Most operational risks were medium severity
-

Business Impact

The dashboard improved programme management by enabling:

- Faster reporting
 - Better accountability
 - Improved fund tracking
 - Early risk identification
 - Better strategic planning
-

Skills Demonstrated

This project demonstrates strong proficiency in:

- Data Cleaning
 - Data Modeling
 - DAX
 - Dashboard Design
 - KPI Analytics
 - Monitoring & Evaluation
 - Business Intelligence
 - Data Storytelling
-

Conclusion

The UNDP Kano M&E Indicator Tracker successfully transformed raw programme data into actionable insights.

The project demonstrates the practical application of analytics, dashboard development, and M&E reporting within international development environments.
