Project Date

2026

Executive Summary

This report presents the findings and insights from the UNDP Kano Monitoring & Evaluation (M&E) Indicator Tracker Dashboard developed to monitor programme performance across 12 Local Government Areas (LGAs) in Kano State, Nigeria.

The dashboard was designed to provide stakeholders with a centralized performance monitoring system capable of tracking beneficiary reach, programme KPIs, budget utilization, and implementation risks.

Using a dataset containing over 1,500 beneficiary records, the dashboard enabled real-time analysis of programme delivery and supported evidence-based decision making.

The analysis showed strong programme performance in urban LGAs such as Kano Municipal and Tarauni, while a few rural LGAs experienced slower implementation due to operational challenges.

1. Background

The United Nations Development Programme (UNDP), in partnership with Kano State Government and local implementing partners, launched a Youth Livelihood and Empowerment Programme.

The programme aimed to improve:

- Youth employability
- Entrepreneurship development
- Women empowerment
- Financial inclusion
- Household economic resilience

As programme scale increased, manual reporting through spreadsheets became inefficient and reduced visibility into programme performance.

To solve this challenge, an interactive Power BI dashboard was developed.

2. Problem Statement

Manual reporting processes created several challenges:

- Delayed monthly reporting
- Difficulty tracking KPI performance
- Poor visibility of underperforming LGAs
- Weak budget utilization monitoring
- Slow risk escalation and response

The absence of a centralized analytical dashboard made data-driven decision making difficult.

3. Project Objectives

The main objectives of this project were:

- Track total beneficiaries reached
 - Monitor programme KPIs against targets
 - Analyze gender and youth inclusion
 - Measure income improvement after intervention
 - Track budget allocation and spending
 - Identify operational and implementation risks
 - Support evidence-based programme management
-

4. Dataset Overview

The project dataset consisted of 4 integrated tables.

Beneficiaries Table

Contains 1,500+ beneficiary records with:

- Beneficiary ID
- Registration date
- LGA

- Gender
- Age
- Programme type
- Grant amount
- Employment status
- Income before and after intervention
- Satisfaction score

KPI Tracker

Contains programme targets and actual performance.

Example indicators:

- Youth trained
- Women supported
- MSMEs funded
- Jobs created
- Farmers supported

Budget Tracker

Contains:

- LGA budget allocation
- Amount spent
- Remaining balance
- Utilization rate

Risk Register

Contains:

- Operational issues
- Severity
- Status
- Risk distribution by LGA

5. Tools & Technologies

This project was developed using:

- Python (dataset generation)
- Microsoft Excel

- Power BI
- Power Query
- DAX

Key skills applied:

- Data cleaning
 - Data modeling
 - KPI analytics
 - Dashboard design
 - Data storytelling
-

6. Dashboard Overview

The dashboard contains 4 pages:

Page 1 — Executive Overview

Shows:

- Total beneficiaries
- Female participation
- Youth participation
- Total grants disbursed
- Budget utilization
- Satisfaction score

Page 2 — Programme Performance

Shows:

- KPI targets vs actual
- Achievement percentages
- Programme performance trends

Page 3 — Budget Monitoring

Shows:

- Budget allocation
- Spending analysis
- Utilization rate by LGA

Page 4 — Risk Dashboard

Shows:

- Risk severity
 - Open risks
 - High-risk LGAs
 - Operational issues
-

7. Key Findings

Beneficiary Reach

The programme reached more than 1,500 beneficiaries across 12 LGAs.

Urban LGAs recorded the highest participation levels.

Top-performing LGAs included:

- Kano Municipal
 - Tarauni
 - Fagge
-

Gender Inclusion

Female participation exceeded 50%, indicating strong gender inclusion.

This reflects successful women-focused empowerment interventions.

Youth Participation

Most beneficiaries were aged 18–35.

This confirms the programme successfully targeted youth populations.

Programme Participation

The most popular programme categories were:

- ICT Training
- Tailoring
- Digital Marketing
- Agribusiness

This indicates strong demand for both digital and vocational skills.

Income Growth

Beneficiaries recorded clear income improvement after programme participation.

Average post-intervention income was significantly higher than baseline income.

This suggests positive economic impact.

8. Budget Analysis

Budget monitoring showed strong financial performance.

Key observations:

- Most LGAs utilized over 80% of allocated budget
- Urban LGAs had faster fund absorption
- Some rural LGAs showed slower expenditure

Overall budget utilization exceeded 80%.

This indicates strong financial execution.

9. Risk Analysis

The dashboard identified several recurring operational risks.

Major risks included:

- Delayed grant disbursement
- Data entry inconsistency

- Incomplete attendance records
- Low female participation in some LGAs

Risk severity analysis showed:

- Majority of risks were Medium
- Few were High severity
- Several remained open

These risks require continuous monitoring.

10. Recommendations

Based on analysis, the following actions are recommended:

Improve Reporting Quality

Strengthen field data validation to reduce reporting errors.

Support Low-Performing LGAs

Provide additional support to underperforming LGAs.

Improve Grant Monitoring

Introduce stricter disbursement monitoring and reconciliation.

Increase Female Outreach

Target LGAs with lower female participation.

Enhance Risk Escalation

Develop faster issue escalation mechanisms.

11. Conclusion

The UNDP Kano M&E Indicator Tracker successfully transformed raw programme data into actionable insights.

The dashboard improved visibility into programme performance, financial execution, and operational risks.

By enabling real-time monitoring, the solution supports evidence-based decision making and improves accountability across programme implementation.

This project demonstrates advanced capabilities in:

- Monitoring & Evaluation Analytics
- Power BI Dashboard Development
- KPI Reporting
- Programme Performance Analysis
- Data Storytelling
